

## Market Research Intern (starting ASAP)

We are MIRobotics, an early stage startup that strives to introduce modular, man-packable inspection and monitoring robots into fish farming and environmental monitoring. Aquaculture is the primary focus and the first reachable market for MIRobotics. It is no surprise that with the wild-catch fisheries maxed out since 1990, aquaculture is the fastest-growing food production sector. Already by 2018, aquaculture has already taken over wild catch. We want to monitor and inspect fish farms, to provide a better living environment for the fish, consequently, better products for the consumer and increased return value for the aquaculture.

We want YOU to help find out how the aquaculture market is developing and give us the possibility to devise a viable business strategy. This paid internship (600-800 CHF depending on qualities and hiring time) is to start asap. If you fill any or all qualifications below, please contact us with a motivational email and your CV ([info@mirobotics.ch](mailto:info@mirobotics.ch)).
